#### **OBJECTIVE**

Web development has never been "just a job" for me. It's offered an engaging challenge to continually learn and improve my skills in creating high-quality websites and web-apps using currents languages, frameworks and tools. What started as a simple "Hello World" has become a full-fledged passion that only gets more exciting as the years go by.

Below, you'll find some projects I've completed that showcase my skills and general background in developing websites.

	SKILLS	
<u>LANGUAGES</u>	<u>FRAMEWORKS</u>	TOOLS
HTML5/CSS3	REACT	GIT
JAVASCRIPT	BOOTSTRAP	VS CODE
SASS		
	PROJECT EXPERIENCE	

### WEATHER APP | HTML5, SCSS, JS, API

- The app interface was built using html and sass was used to style the page.
- knowledge of API was used and incorporated into the code using JavaScript to make calls to the server.
- Having been used by over 20 people to tell the weather, the app has met the user's needs.

#### TODO APP | REACT

- The app was built using react and all reusable components were rendered efficiently.
- Helps the user keep track of their daily activities, hence Increasing the user's daily productivity by over 40%.
- The app has been used by over 15 people and they all claimed it was user friendly.

# SNEAKERS ECOMMERCE PAGE | HTML5, CSS3, JS, Bootstrap

- The app interface was built with html5, css3 and bootstrap5(used to make the carousel).
- It was made responsive using various media-queries and breakpoints and a functioning navbar.
- Knowledge of DOM manipulation was used to make it more interactive. Displaying the empty cart when the "cart" icon is clicked, adding items to cart when the "add to cart" button is clicked (and calculating the sum for the selected amount) and finally clearing the cart when the "delete" icon is clicked.
